Up to 20%
longer
lifetime

Working with drum cutting equipment?

Check out these new picks from Epiroc, the company that recently launched the game-changing V Cutter ¹.

The world's most innovative drum cutters deserve the most innovative picks, so we developed our hexagon range. We call them HexPicks.

Their unique hexagonal body shape will make your daily maintenance much easier and save you time and costs. Simple but ingenious!

Also, thanks to their superior durability, you can rely on maximum performance, minimum wear, and up to 20% longer lifetime.

Suitable for transverse drum cutters, V Cutters and longitudinal cutters, HexPicks will be standard for all deliveries from our factory from 2023.

Recognize this?

Picks sometimes stick and stop rotating, so you need to spend time daily with a hammer making sure they are all rotating freely. Also, working in rock or concrete, it is unavoidable that picks wear out, and replacing them on-site is hard work that takes time.

We have the solution!

HexPicks! Their unique design will make your job easier. You can easily unstick them or replace them onsite using a hexagon wrench. In addition, they last up to 20% longer. If you work with drum cutters these benefits will make your day!

Two key features make Epiroc HexPicks extra durable

1

A tough, stress-resistant tungsten carbide insert

This insert is brazed into the body of the pick and is the heart of the cutting operation. Manufactured in a sintered material made up of tungsten carbide with a cobalt binder, it is designed to withstand the extreme stresses caused by continuously impacting the rock. A variety of carbide grades and shapes are available, depending on the application.

2

A heat-treated steel pick body

The head and shaft of the pick body are made from "optimized" heat-treated steel and serve as the support for the tungsten carbide insert as well as "full" protection for the pick box.

Unique design

only available from Epiroc. Simple to replace using a hexagon wrench.

- ⊕ Easy daily maintenance: HexPicks can be unstuck with a hexagon wrench
- ⊕ Better rotation optimizes the resharpening process
- ⊕ HexPicks can be replaced without effort on a jobsite
- ⊕ HexPicks protect the drum's pick box

QuickSnap retaining system

for fast, easy changing of picks.

- ⊕ Smart retaining clips enable picks to be changed in a matter of seconds
- ⊕ Savings in time of over 50% compared with normal circlip or knock-on retainer

Up to 20% longer lifetime

(compared to all competing products).

- ⊕ More uptime, less time spent on maintenance
- ⊕ Optimized hardening process
- ⊕ More wear resistant material
- ⊕ Lower costs

HexPicks make your job easier!
